The Realm of Tones.

Three hundred and two Portraits of the most celebrated European Musicians, with short biographical notices. With an Appendix, containing the Portraits and Biographies of the principal American Musicians. Edited by DR. FREDERIC LOUIS RITTER. Price, elegantly bound in cloth, - - - - - \$3.75

FROM THE PUBLISHER'S PREFACE.

It is the aim of this work to present a number of portraits of musicians arranged according to nationality, epochs and inner artistic relationship, in order to illustrate the development of music, the most popular of all arts.

The literary matter accompanying each portrait is short and concise, giving, besides the mere biographical facts, the titles of the principal works and their aesthetic estimate, pointing out at the same time, those peculiar characteristic qualities by means of which the artist was enabled to discover new paths, to enrich his art and to bring it to a higher scale of development.

Thus this work may serve the reader, even if he does not possess any special historical culture, as a short compendium of the history of music; at the same time, on account of its handy form, it will be a convenient book of reference and a welcome substitute for those voluminous dictionaries, which treat of musical subjects to great length. The order in which the portraits follow each other, is not to be looked upon as of any categorical importance; in fact, headings, marking distinct paragraphs, have been intentionally omitted, for it is difficult to classify free artist-natures in music, the freest of all arts.

In accordance with the general plan of the work, the portraits of the Italian artists are followed by those of the Germans, the French, the Scandinavians, and the English; the violinists, the pianists, the composers of operettas and rhythmic dances, the violoncellists and the great stars of dramatic and lyric singing are classed together.

The portraits have been printed by means of the new photographic process by the celebrated house of *William Hoffmann*, of Dresden.

May it find a friendly acceptance in every house, where noble music enjoys a warm and fostering care.

LIST OF PORTRAITS.

Abt, Adam, Albrechtsberger, Ambros, Ardit, Arnold R., Anschütz C., Artôt, Auber, Bach C., Bach Seb., Baillot, Baffe, Balatka Hans, Banck, Bargiel, Bärmann, Becker, Beethoven, Bellini, Benda, Bendel, Benedict, Bennett, Bergmann Carl, Bergner Fr., Bériot, Berlioz, Bitter, Bizet, Boccherini, Boieldieu, Boise O. 19. <i>Impromptu</i> , Op. 11, No. 1, Theo. Leschetzky.	

OPINIONS OF THE PRESS.

The object of the compilers has evidently been to produce a work that shall be generally useful to organists. Although a good deal of of technical skill is needed to perform some of the selections offered in the volume, there are none that can be voted really difficult. In thus avoiding unnecessary difficulties, the compilers have exhibited practical sense, and have made their work ten times more available than it otherwise would have been. The pieces have been registered with care, and fingering and pedal marking added wherever necessary. Of course, the registration will be viewed as rather indicating the effect required than wholly obligatory, a fact that organists readily comprehend owing to the variation in stops—both as regards voicing and number of different organs.—*N. Y. Musical Courier.*

This is a collection of thirty-seven miscellaneous pieces, twenty-five of which are reprints of original organ compositions published in Europe, two are original works, bearing the names of the editors and the remaining ten are arrangements by them. As a whole, the volume will prove a boon to American organists who, as a class, are beginning to recognize the fact that persistent presentation of the painfully erudite and uninteresting works of the modern German school of organ writers—although well adapted as they are for Postludes, when it is desirable to hurry the congregation out of church—is not calculated to interest even a professional audience, if played to the exclusion of aught else.

An organist should be something more than a mere machine invented for the purpose of struggling through a plethora of modern fugal matter, which is a senile copy of Bach in every instance, minus his genius and accomplishing his task with mechanical accuracy and in stereotyped fashion. The instrument is one of an intensely sympathetic nature and if players thereon will realize that they must use brain as well as fingers and that orchestral works can be presented more satisfactorily thereon than on any other individual instrument, for reasons already explained in these columns, the organ will be universally recognized as it deserves, a result already achieved on the other side of the Atlantic. Orchestral organ playing, however, requires special knowledge in order to reproduce the effect desired, but as this is a matter in which the competent executant does not rely on the "arranger," his peculiar views will not affect his convenience and therefore we cordially welcome this work, as it contains an admirably selected series of pieces of varied style, forming quite a little repertoire for an intelligent organist.—*Music and Drama.*
